

RB 900 Dust Collector

The RB 900 is a high quality 2HP 900 CFM cartridge style dust collector. This heavy-duty collector is built entirely from 12 gauge steel and is hand welded. This gives the unit maximum durability and no seams or seals to leak during operation. Our unique design allows for the pleated cartridge filter to be loaded from the top ensuring a tight seal. Cleaning of the filter is accomplished at the turn of a handle, releasing air inside of the filter and purging dust downward into the sump at the base of the unit for disposal.
